

BeautySeamer

Side Seaming Machine

Precision and Efficiency: BeautySeamer for Flawless Cosmetic Laminate Tubes

The BeautySeamer side seamer is specifically designed for the production of cosmetic laminate tubes. It is equipped with a precision control system that continuously monitors the laminate's position using sensors. This provides constant feedback and control commands to the laminate guide system, automatically realigning the laminate edge if any deviations occur.

Cosmetic Laminate Tubes with 360° Decoration

The BeautySeamer side seamer supports NEOSeam technology, which enables seamless 360° decoration without visible overlaps. The result is a tube with a high-quality appearance and feel. By using side trim, material consumption is minimized (no additional laminate strip required).

Efficient Tool Changeover

With the BeautySeamer side seamer, size parts (tube diameter changes) can be changed in just 10 minutes.

This allows you to quickly adapt to different tube sizes and designs, saving time and increasing production flexibility.

Your Benefits

- **360° design with NEOSeam:** Seamless decoration without visible overlaps
- **Stability and durability:** Tubes remain intact even after multiple uses and deformations
- **Tool change in no time:** Efficient replacement of size parts (tube diameter change) in just 10 minutes
- **Resource-saving:** Lower material input, as no additional labels are required
- **Flexibility:** Ideal for smaller series and variable productions without additional material costs

Technical data

Tube diameter	19 - 63.5 mm
Tube length	60 - 240 mm
Speed up to	150 tpm
Available technologies	NEOSeam or Overlap
Application area	Cosmetic

Note: Further parameters are available on request.
